

THE FOLLOWING CORRECTIONS WERE MADE TO THE DI SPREADSHEET – AS OF AUGUST 2023:

1. CCI-porosity

The formula for CCI-porosity was corrected. The previous formula erroneously used the diameter where thickness should be used.

2. CCI and CCI-porosity variability check

The formulas used for OPI and WSI are used in this case as well with the same statistical factors. The repeatability values for CCI and CCI-porosity used are 9.1% and 5.5% after Stanish (2006).

3. OPI variability check

The repeatability value was corrected from 1.8% to 1.4% (Stanish (2006)). The reproducibility value of 1.8% was used in the formula instead of the repeatability value.
